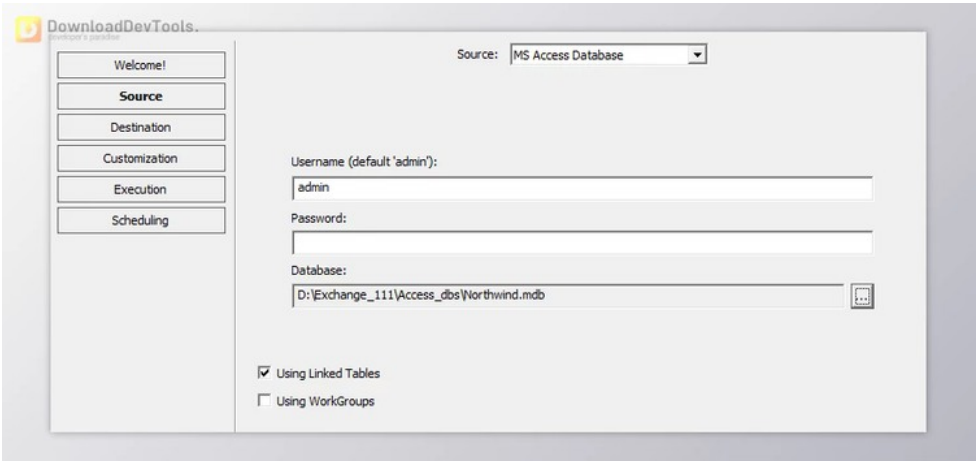
DMSoft DBConvert for Access and PostgreSQL v4.4.1

2024-12-28 23:26:57



DMSoft DBConvert for Access and PostgreSQL streamlines converting and synchronizing data between Microsoft Access and PostgreSQL-compatible databases, ensuring swift and effortless migration. With this software, users can seamlessly perform data conversion and synchronization tasks across various combinations of databases, including Microsoft Access, on-premises PostgreSQL, AWS RDS/Aurora, CockroachDB, Google Cloud SQL for PostgreSQL, Azure Database for PostgreSQL, and Heroku Postgres.

Automated migration of MS Access queries to PostgreSQL views eliminates the need to understand SQL dialect differences, simplifying the conversion process. Additionally, DBConvert offers flexibility by allowing users to save result data as a PostgreSQL dump file or PHP script, enabling bypassing of restrictions when direct access to the PostgreSQL server is unavailable.

provides robust two-way database synchronization capabilities, facilitating seamless data synchronization between Access and PostgreSQL databases. Users can migrate their entire Access database or select specific schemas, tables, queries, fields, indexes, and foreign keys during the setup phase, ensuring precise synchronization tailored to their requirements.

Key Features of **DMSoft DBConvert for Access and PostgreSQL**:

1. Enables quick and easy conversion and synchronization between Microsoft Access and PostgreSQL-compatible databases
2. Supports various combinations of databases, including Microsoft Access, on-premises PostgreSQL, AWS
3. RDS/Aurora, CockroachDB, Google Cloud SQL for PostgreSQL, Azure Database for PostgreSQL, and Heroku Postgres
4. Automated migration of MS Access queries to PostgreSQL views simplifies the conversion process
5. Provides flexibility to save result data as a PostgreSQL dump file or PHP script for bypassing restrictions when direct access to the PostgreSQL server is unavailable
6. Robust two-way database synchronization capabilities ensure seamless data synchronization between Access and PostgreSQL databases.
7. Allows users to migrate their entire Access database or select specific schemas, tables, queries, fields, indexes, and foreign keys for precise synchronization tailored to their requirements
