VX Search v17.1.12 + Activator
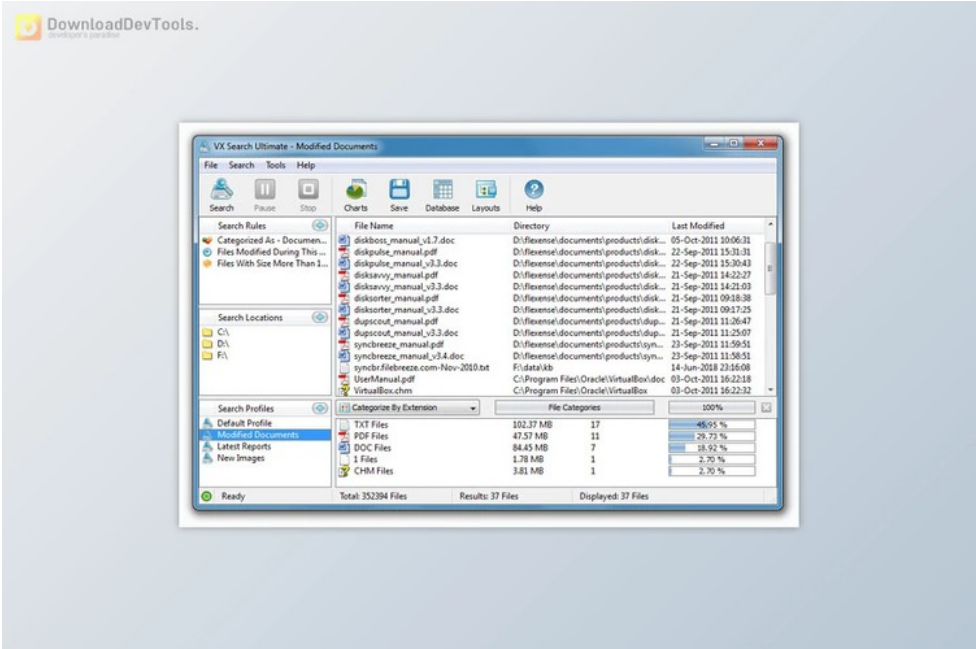

2025-07-17 15:39:38   label 我要反馈   下载页面

VX Search is a powerful file search solution with automated, rule-based searches supporting various parameters for categorization and filtering. It facilitates network-wide searches, simultaneous searches across servers and NAS storage devices, periodic operations, and conditional actions based on user-defined rules. The tool's versatility extends to exporting reports in different formats, including HTML, PDF, Excel, and integration with SQL databases.

The software's network search functionality enables scanning the network, detecting servers and storage devices, and conducting searches across numerous locations. With a command line utility for scripting and a server version running as a background service, **VX Search** caters to IT administrators' needs for automated, scheduled file search operations. It excels in batch file searches across the network, executing pre-configured commands on multiple servers and generating individual reports for each location.

For enterprise users, offers client GUI applications and a web-based interface through **VX Search** Enterprise, providing a flexible solution for executing searches, reviewing results, and saving reports using standard web browsers. **VX Search** is a comprehensive solution suitable for individual users and enterprises, offering efficient and customizable file search functionalities across diverse environments.

Key Features of **VX Search**:

1. Rule-based file search
2. Categorization and filtering of search results
3. Support for searching files by various parameters
4. Network-wide searches across servers and NAS storage devices
5. Periodic and automated file search operations
6. Conditional actions based on user-defined rules
