My brain was utterly overwhelmed when I made my first 3D rendering in college. It could be a mess; however, dragging and dropping real-looking materials on the CAD model was awe-inspiring.

Sure, I had a lot to master, but learning what to do with the program was an issue. In the following years, I started freelance work full-time, and I resolved to concentrate on enhancing my rendering skills.

After many hours of practice, participating in online forums, and selling services to my clients, I became confident. I began to create KeyShot instructional videos for YouTube. The tutorials were noticed by a company and led to my being offered a job as an International Training Specialist at Luxion, the manufacturer of KeyShot.

I spent three years traveling globally, instructing KeyShot to engineer and design teams from today's most well-known and respected brands.

Ultimately, I quit Luxion and started my small visualization studio, where I make animations and renders for my clients.

I'm blessed to have found an opportunity to make a living doing what I enjoy, and I'd like to assist everyone else in achieving it. If you're a student working on your own or have a job with an employer, This course was designed to help you.

I've been using KeyShot for over ten years and have designed this course to speed up your learning. My objective when I decided on the course was to create a course that was so great that it could help you move from a beginner level to a professional al level of competence.

If you're self-taught with KeyShot, This course will fill in the gaps in your knowledge and help you improve your routines and workflows.

About a year ago, I bought a Google Home Mini and disassembled it to create a completely accurate 3D model of it down to the millimeter. I finished the model meticulously, down to the minor internal PCB components and wires. I planned to use this model to create another personal portfolio piece.

When I created this KeyShot course, I wanted to include a 3D model for the project-based lessons that weren't overly basic or boring, like so many other tutorials. So, I included the model I spent nearly a year making in my spare time. Not only will you have the model to learn from, but you can use it in any way, personal or commercial, without any restrictions (as long as you don't sell it).
