Blender Market - Electrify v4.0:

"Electrify - Quick Lightning" is a powerful lightning generator tailored for Blender 2.8 and newer versions, fully compatible with Eevee and Cycles rendering engines. It enables effortless creation of customizable lightning effects with just a single click, perfect for adding dynamic electrical elements to any scene.

The tool features four distinct lightning types: "Simple Lightning" allows shaping akin to bezier curves, "Branched Lightning" offers controlled branching, "Random Lightning" generates unique shapes each time, and "LowPoly Lightning" creates plane-like effects suitable for games. Each type is fully animatable and includes adjustable parameters such as distortion strength and thickness.

Noteworthy features include automatic application of lightning materials, straightforward setup for quick rendering, and support for spawning multiple lightning instances. Users benefit from a detailed example file, a comprehensive 19-page PDF user guide, and free future updates. The tool simplifies workflow with features like shrink wrap modifiers that seamlessly connect lightning to selected objects, enhancing realism and saving valuable production time.
