- 3 Different resolutions
- Well organized endeavor
- Easy Color Change
- Universal Expressions
- Fast Rendering
- Works with almost any font
- HTML Catalogue
- All future upgrades are FREE

How to use

Single Categories

In case you decide to use only some parts of the template, you don't have to load the whole big main file with all elements. In Single Files, you can pick the categories you want to use.
Main file

Contains all the elements and scenes. This library is really large which might make it difficult for some users. In case your After Effects is running slow or you can't open the large file, please use single categories.

You can either locate stories in their opened folders (**Stories / Events for instance**) or you can use the search bar to find the stories by their names.
Please use the **HTML catalog** as a reference.

Project Review by Dope Motions

Project Panel

You can find each composition of the project here. All of the stories are in the folders. Just select the folder and choose stories.

Editing Text

1. Open the project with After Effects
2. Open a scene that you want to use > and text composition inside this project.
3. Select and type your text into Text Layers.

Add Media

1. Open a scene that you want to use and open placeholders inside.
2. Import your media files **(File> Import> File > select your photo/video)**
3. Drop your new media files inside the opened compositions.

Color Controlling

Select the "**Color Control**" layer select each color in the effects panel and change it.

How can I see all of the layers for more customization?

Just turn off the "**Shy**" switch in each composition and you can find the other layers.

Effect Controls panel

All the effects such as the color controller etc... are in
The "Effect Controls" panel, is near or behind the "**Project Panel**"
If you can't see this, press the (**F3**) key

How to Render:

1. Open the "**Stories**" folder and select the composition which you want to render
2. Go to Composition-->Add to Media Encoder Queue

What is Instagram Stories V3?

"Instagram Stories V3" denotes a template or version designed for crafting content within Instagram Stories, a feature available on the popular social media platform, Instagram. Instagram Stories are temporary posts, encompassing images, videos, or other multimedia elements. They are prominently displayed at the top of a user's Instagram feed and automatically disappear after a 24-hour period.

The "V3" in the title suggests that it's the third iteration or variation of a specific template or style tailored for Instagram Stories. Such templates are commonly employed by individuals, businesses, and content creators to produce visually captivating and interactive stories for their audience. These templates often include pre-designed graphics, animations, and other components, streamlining the process of generating compelling content for Instagram Stories. Depending on the context in which you encountered "Instagram Stories V3," it could be a particular design or template that you can utilize to enhance your Instagram Stories.
