Virtual Blender Camera v1.1 for Blender: Introducing a revolutionary feature: the ability to capture photographs within Blender! With our new and improved virtual camera, you can now experience the art of photography like never before.

Utilizing a collection of lenses, layered filters, and sophisticated compositing techniques, this virtual camera replicates the process of photographing with an old film camera. By accurately simulating the lens and aperture, our system produces stunning distortion and bokeh effects unparalleled by traditional compositing methods.

Experience the magic of virtual photography with images captured by 2nsCaboose, iMeshh_3D, and Marco Pedrana. With our virtual camera, the possibilities are endless, and the results are truly breathtaking.
