**Attach and Direct layers** Together Form Coating paths, shape Generators, as well as complex animated silhouette layers!

Select your shape layer, press a button, and then get nulls Connected to the outline of this shape! Each null has controls for place and cancel. The most important contour layer profits controls for trimming and offset. You might even select present layers to attach them straight. Continue animating the contour layer following the layers that are attached!

- Produce a draw-on or path effect
- Set up a few layers follow each other across the same Route
- Easily create complex motion paths from contour Modifiers such as turn, zig-zag and much more
- Animate and change the contour as other layers are Guided together.
- Position Offset for Wayfinder Followers. You can currently Counter attached layers in the course in x/y.
- How to utilize Wayfinder
- Select or make a contour layer. Be Sure to currently Have any form modifiers such as Zigzag, Twist, etc.. already implemented.
- Input the Number of points you need attached or choose Present layers in the sequence you would enjoy them attached.
- Check"Hide Calculation Layers" too bashful the Layers made to compute points across the contour. These are not used for cartoons.
- "Automobile Orient Points (6)" is a beta attribute Allowing things to rotate properly across the contour without even using AE's"Orient Along Route" funcNon that doesn't always function properly for Wayfinder Followers.
- Click on"Attach Layers."
- Animate the first silhouette coating... Layers stay attached!
- The Principal contour layer will have a"Wayfinder Leader" controller For trimming or offsetting with attached layers after.
- The generated nulls (or alternative Attached layers) will have a"Wayfinder Follower" controller for separately Positioning together and offsetting in the contour.
