Blender Market - Bmesh Clean v1.1.2:

Did you ever find yourself importing 3D models from software like SketchUp or others and wish for a quicker way to clean them up? Tired of going through multiple steps like Limited Dissolve, Tris to Quad, Triangulate, Recalculate Normals, Delete Loose, Merge By Distance, and Shade Smooth manually?

Imagine an All-in-One solution where with a single click, you could clean multiple objects, remove loose elements, and duplicates, apply Limited Dissolve, and orient faces correctly. It's not just about automation; it's about visualizing the changes with detailed feedback, ensuring you see precisely what has been done.

With Bmesh Clean, you can achieve all this and more. This tool simplifies the complex cleanup process, allowing you to streamline multiple operations into a single click. Whether it's applying Shade Smooth and setting auto-smooth angles or saving your preferred settings as presets, Bmesh Clean is designed for efficiency and ease of use.

Now, cleaning up 3D models becomes a hassle-free task, as Bmesh Clean handles the intricacies of the process in the background. Save your customized settings for different scenarios, and with one click, witness the transformation of your imported models into cleaner, more optimized versions. Bmesh Clean is your go-to tool for maintaining a tidy and efficient 3D workspace.
