

DevExpress UI Templates for WinForms (EAP) v25.1.5 Retails

2025-10-09 20:45:47

offer a convenient way to speed up the development of your applications with ready-to-use form designs. These templates are available exclusively to Universal, DXperience, and WinForms services subscribers and are designed for early testing to give developers a head start. With these templates, you can quickly add polished, professional forms to your projects, including login screens, password creation and recovery, address, and payment forms. Plus, each template is flexible, allowing you to tweak them per your needs.

To further streamline development, the DevExpress templates include pre-designed master-detail views for quick integration. This feature uses grid-based and tree-view layouts ready to use, incorporating CRUD (Create, Read, Update, Delete) operations, which are essential for database interactions. These templates are built to support DevExpress Application Skins and follow the MVVM architecture, ensuring a modern and scalable approach to application development.

DevExpress UI Templates for WinForms also come equipped with advanced data editor designs that facilitate easy and efficient data entry, reducing the need for routine adjustments. For managing contacts, a Contact List template includes a built-in search functionality and is styled using HTML & CSS, allowing for detailed customization of appearance, text, and metadata.

Key Features of DevExpress UI Templates for WinForms :

1. Forms: Quick setup for common forms such as Login, Create Password, etc., with customization options.
2. Master-Detail Views: Ready-to-use layouts with integrated CRUD operations, supporting DevExpress skins and MVVM architecture.
3. Data Editors: Pre-designed templates that simplify the creation of user-friendly data entry forms.
4. Contact List: A template with built-in search functionality, customizable through HTML & CSS for a tailored appearance.
5. Buttons & Groups: Various interactive elements, including various types of buttons and grouping options.
6. HTML & CSS Support: Leverage the latest web styling technologies to customize templates directly within Visual
