About Surface Imperfections: Surface imperfections encompass subtle variations in surface appearance derived from natural weathering or human interaction. They exist in myriad shapes and forms, from smudges on electronic devices to dirt on vehicles and water stains on mirrors. This collection captures these imperfections from natural surfaces, ensuring high-quality and ultra-realistic results. While procedural or painted textures often lack the fidelity of real-life elements, this pack bridges the gap by offering a diverse range of finger smudges, weathering effects, generic smudge patterns, specific fingerprints, dust, and grunge maps.

In 3D software, these textures prove potent when used as material masks or for gloss, normal/bump, or metallic variation. They add a level of definition to your materials, reacting realistically to enhance the overall authenticity of your digital projects.

- Tiling Textures: Hand-tiled smudge textures are equalized to minimize visible repetition.
- Stencils: Non-tiling textures suitable for use as stencils in 3D painting software like Substance Painter or Mari or for arbitrary realistic detailing elsewhere.
- Decals: Non-tiling separated textures, ideal as brushes in 2D and 3D painting software, and decals in game and render engines.
