### 3D vehicles

In addition to the standard 2D trackers, Travel Map includes an array of 3D animated vehicles that don't require plugins.

If you'd like to illustrate the route of your most recent bike trip, you need to download the map, sketch your route, and select the bicycle from the list of vehicles.

### The script will handle the remaining!

Every vehicle can be customizable; changing the size, color, or color is possible. You can also add text, logo, or image.

### Switch Trackers

In certain situations, you might require replacing the vehicle you have in place with another on the same route.

For instance, if your company handles transport, you may wish to demonstrate to your clients that the package begins its journey via a plane, then moves to a truck, and finally, the van is utilized to get it to the final destination.

### Through Travel Map, you can do it!

By hitting the "Switch Trackers" button, you will choose which vehicle you want to choose and when to use it.

### Camera Animation

It is also an excellent script for travel. Travel Map script also takes charge of all aspects of the camera's motion.

You only need to decide which vehicle to follow then the program will determine the motion for the camera.

Your responsibility is to utilize the appropriate slider to adjust or animate the zoom.

You can also decide whether to drive in parallel or rotate around them.

Suppose you'd instead animate the camera in manual mode; no problem! Choose"Manual Camera," then select the "Manual Camera" option and customize your animation by adding new keyframes to the position and the camera's rotation.

### Add pins

The Travel Map is 5. You can include as many pins as you'd like in your routes and place the timer where you'd like your map to show. Then hit the "Place" button and "Place Pin" button.

The script will display at the vehicle's precise location, both the selected pin and an XML file which you can alter at choice. The color of each pin may be altered through a control panel.

Comparison of Map Route Generator and Map Comparison

The Travel Map and Map Route Gener and a range of alternatives; however, based on the type of animation, you'll need to be aware of their differences and similarities.

Read the most significant distinctions between the two products before deciding on the best model for the project you are working on.

Map Route Generator lets you stop the tracker at the period you select for the specific points. Travel Map does not have this feature; trackers begin from point A and reach point B without stopping at intermediate points.

Map Route Generator lets you create one route; travel Map up to four routes simultaneously.
