Unreal engine - Procedural Escalator & Travelator (UE v4.22 - 5.3):

Presenting a dynamic blueprint engineered to procedurally adapt the size and animation of escalators/travelators, revolutionizing your virtual infrastructure. This blueprint boasts an array of parameters, allowing seamless adjustment of escalator length, speed, direction, and type (escalator or travelator).

Constructed with meticulous attention to detail, the blueprint comprises 7 distinct mesh modules, complemented by 3 sets of textures (totaling 9 variations) and 2 materials, along with 4 material instances. This meticulous design ensures optimal performance while delivering visually stunning results.

- **Procedural Design:** Enjoy the convenience of a single blueprint capable of dynamically adjusting escalator/travelator attributes, streamlining development and enhancing versatility.
- **Dynamic Animation:** Experience immersive animations that effortlessly synchronize with the escalator/travelator's length, creating a seamless and realistic user experience.
- **Flexible Parameterization:** Effortlessly modify variables such as type, speed, extension, and direction, empowering developers to tailor escalators/travelators to suit specific requirements with ease.
- **Escalator Manager:** Enhance performance efficiency with the included "BP_EscalatorManager" blueprint, consolidating Tick operations for all escalators/travelators within the scene.

Supported across multiple development platforms including Windows and Mac, this blueprint is meticulously documented, featuring comprehensive comments and exposed variables for simplified setup and customization.

Elevate your virtual environments with the ultimate solution for procedurally controlled escalators/travelators. Experience unparalleled flexibility, performance, and ease of use with this groundbreaking blueprint.
