

## ZylMap.NET v1.05 + CRACK

2025-04-11 20:31:33    [label](#)    [我要反馈](#)    [下载页面](#)

is a .NET library that allows you to embed Google Maps and Open Street Map into your WinForms or WPF applications. It includes a variety of interactive features such as markers, shapes (like polygons and circles), and popups. You can also handle map events like clicks and mouse movements, and even use geocoding to convert addresses into coordinates and vice versa. The library works with multiple versions of .NET Framework and provides sample applications to help you get started.

The demo version is fully functional, though it will display a reminder to purchase the licensed version, which removes this limitation. To use Google Maps, you'll need to obtain a free API key from Google, which is easy to set up within the component. **ZylMap.NET** works on Windows systems and supports a range of .NET Framework versions, making it flexible for different project setups.

### Key Features of ZylMap.NET :

- 1. Interactive Maps: Integrates Google Maps and Open Street Map directly into WinForms and WPF apps.
- 2. Map Elements: Supports adding markers, polygons, polylines, circles, and rectangles for detailed map visuals.
- 3. Geocoding: Convert addresses to coordinates (geocoding) and coordinates back to addresses (reverse geocoding).
- 4. Map Events: Handle user interactions like clicks, mouse movement, and center changes on the map.
- 5. Cross-Version Support: Compatible with .NET Framework versions 4.62 to 8.0 and includes demos for Visual Studio 2019 and 2022.
- 6. API Key Integration: Requires a Google Maps JavaScript API key to unlock full functionality.
- 7. WebView2 Support: Utilizes WebView2 runtime and Microsoft.Web.WebView2 NuGet package for map rendering.
