

Aescripts Split Blur v1.3.2 (Win, Mac-v1.1.1)

2025-02-10 16:51:03 label 我要反馈 下载页面

Aescripts Split Blur v1.3.2 (Win, Mac-v1.1.1): the influence splits the picture into multiple mixed duplicates of itself. The space of these splits is calculated in accordance with the Luminosity of every pixel and may be modulated in a lot of ways. Split Blur seems Like a normal gaussian blur on little blur amounts but slowly transforms To a distinctive kaleidoscopic picture split with higher distances.

- Stations - Let's you define which color channels if the impact is implemented.
- Luma - The result can be applied to all stations evenly employing the general luminance of a pixel.
- RGB - The result is used on each of the RGB elements individually.
- Red, Green, Blue, Alpha - Affects only the chosen station.
- Intensity Supply - The dividing effect is figured utilizing the picture by default, however you Can offer an entirely different layer/track, as a result, signal, for unconventional results. When the secondary coating has different measurements, it is stretched to Fit the key layer.
- Blur Amount - The potency of the blur effect - ie. The most distance of pixels that are split from The source pixel.
- Divide Count - How many duplicates the picture ought to be broken into. The breaks are spaced out Evenly on a circle around the first picture.
- Splits Rotation - Alters the angle of these breaks.
- Curve specifies The way a pixel luminosity is mapped to blur space. (details from the guide)
- Curve Stage offsets The curve with a fixed quantity of levels. (details from the guide)
- Curve Floor defines The minimal divide space.
- Curve Graph visualizes The curve mapping to your own convenience.
- Edge Mode - After the picture is offset from the result numerous pixels in the borders will Always be lost, this specifies the way they are full.
- Wrap - Wraps around the picture.
- Mirror - Mirrors the border pixels.
- Duplicate Last - repeats the previous border pixel.
- Transparent - Leaves the lost pixels vacant.

New Changes:

- Splits Graph - visual representation of splits configuration
- Splits Grouping feature - adds the ability to converge split directions into fewer groups
- Curve Phase Split (RGB filtering only) - additional curve phase shift for R/B components
- Aescripts framework v4.0.7 - improved stability of license checks
- Fix of native Apple Silicon support for Adobe After Effects (beta)
- Aescripts framework v4.0.4 - Fixed "invalid format" error for floating licenses
- Universal macOS binary (Apple silicon support)
- Code signed Windows binary
- Fix of "low-level exception error" for 4K+ videos in Premiere Pro
- Fix of rare error pop-up ("attempt to call CheckoutLayer on non-layer parameter") in After Effects
