Aescripts easyRulers 2 v2.02 (Win, Mac): Designed to make any graphical measuring ruler quick and straightforward. It's great for artists who make gauges, scopes, speedometers, graphical equalizers, HUDs, UI components, historical timelines, instrumentation designs, infographics, sound interfaces, etc.

EasyRulers 2 is an Adobe After Effects hybrid (script + plugin) made to make any graphic measuring ruler quick and straightforward. It's excellent for artists who make gauges, scopes, speedometers, graphical equalizers, HUDs, UI components, historical timelines, instrumentation designs, infographics, sound ports, and electronic vehicle dashboards.

easyRulers 2 provides you with complete control over the design of text numbers. You can alter the beginning point along with the text layer's stepping size, alignment, and colors. Including suffixes or prefixes (or either) to any text layer is also possible. When you click the "Create Ruler" button, it will display (and changes whenever you modify settings) the number range that will get created.easyRulers 2.2 is compatible with these editions of After Effects for both Windows as well as macOS platforms (with Intel or Apple Silicon):

- After Effects Logo
- CS6 + CC
- CC2014
- CC2015
- CC2017
- CC2018
- CC2019
- 2020 + 2021
- 2022
- 2023

easyRulers 2 allows you to adjust the distance, scale, color, and opacity of the text layers with respect to the cursor's location. The type and range of the falloff may also be adjusted easily.

New Changes:

- optimized: limit the "Font Size" number input to the maximum allowed by After Effects (1296 points)
- fixed: a licensing issue on some Korean Windows systems

- EasyRulers is perfect for designing user interfaces, together with curved dials, linear sliders, and indicators
- EasyRulers can restrain the space, scale, color, and opacity of the text layers regarding the place of the file. The scope and variety of the falloff may also be readily corrected.
- EasyRulers Two is ideal for designing electronic automobile dashboards and audio ports.
- Below are a couple of examples made by easyRulers.
