is a .NET reporting tool suitable for web and desktop applications. This is easy and efficient for creating, customizing, and embedding interactive reports. Its visual report designers are available for both developers and business users who can quickly get reports that look professional. It supports modern technologies like ASP.NET Core, Blazor, Angular, WPF, and WinForms, thus accommodating almost any project. And with over 15 export formats, including PDF, Excel, and Word, sharing your data couldn't be easier.

Additionally, this tool will save you time and effort by fitting seamlessly into your existing systems and workflows. It allows you to pull the info you need from all sorts of data sources—databases, web services, whatever—by connecting to them. Its intuitive design and interactive features like drill-down reports and custom actions make it perfect for creating dashboards, invoices, and other business-critical documents.

You can also use **Progress Telerik Reporting** to make your non-technical users more powerful by giving them a web-based report designer embedded within your application. After it is set up, users can work with report creation and styling independently, thus lessening their reliance on developers. With minimal effort, Telerik Reporting takes all the hassle out of visualizing and sharing data to desktops, web browsers, and mobile devices.

Key Features of Progress Telerik Reporting :

- 1. **Easy Integration:** Compatible with ASP.NET Core, Blazor, Angular, WPF, WinForms, and more.
- 2. **Versatile Data Connections:** Connect to databases, web services, CSV files, and ORM frameworks effortlessly.

- 3. **User-Friendly Report Design:** Offers Visual Studio, standalone, and web-based report designers.
- 4. **Advanced Reporting Features:** Includes OLAP processing, charts, maps, barcodes, and conditional formatting.
- 5. **Interactive Reports:** Provides drill-down, sorting, and custom actions for engaging reports.
- 6. **Flexible Export Options:** Export to PDF, Excel, Word, PowerPoint, CSV, and image formats.
- 7. **Embed Anywhere:** Seamlessly embed reports in web and desktop applications.
- 8. **Optimized Performance:** An efficient OLAP engine is used for fast data processing and low server load.
