

## BlenderMarket – Btodo v2.0

2025-02-10 16:40:02 label 我要反馈 下载页面

**BlenderMarket – Btodo v2.0:** Btodo is a straightforward Blender add-on designed for creating and managing notes, to-dos, and texts within Blender's built-in text editor. A user-friendly interface integrated into the text editor's properties panel facilitates creating, renaming, and tagging text data blocks. Additionally, it enables the addition of custom notes as comments to individual objects.

### Ideal for:

- Jotting down ideas
- Planning work tasks
- Creating to-do lists
- Facilitating teamwork management
- Attaching notes to objects for easy reference
- Avoiding the loss of ideas

### Three Tabs:

- Category view: Add/remove categories and filter notes by category
- Tag's view: Manage tags and sort/filter notes by tag
- Object view: List all notes associated with the active object

These tabs are also 'unpacked' in the scene and object properties, enhancing adaptability to different workflows. Users can show/hide panels based on their preferences.

### Caution:

- Deleting an object results in the loss of all notes attached to it
- Deleting a category removes all associated notes
- Deleting a tag from the tag's list removes it from every note

Btodo streamlines the process of organizing, categorizing, and managing notes, offering a convenient and intuitive solution within the Blender environment.

- Create/remove categories for better organization
- Manage notes within each category
- Add custom notes and comments to every object in the scene
- Incorporate existing text data blocks as new notes
- Create/remove tags and assign/remove them to/from notes
- Move notes between categories for flexibility
- List notes by category or by tag for efficient sorting
- Check-list usage with a 'check' parameter for todo-like notes
- Rename categories, notes, and tags with dedicated buttons (avoid direct renaming from Blender UI).
- Rearrange items to suit your preferences
