Aescripts Ustav v1.0.1 (WIN, MAC):

The Ustav is comprised of two major components:

- This is a panel for making Blocks and then managing them.
- The pseudo-effect Layout settings for layout manipulation

Text blocks are constructed and linked with the composition's layout layer using the panels.

The layout layer has options that can be applied to all blocks part of this layout.

The process of working using the Ustav begins with this panel. On the top of the panel are buttons to make the text blocks. At the bottom, there are buttons to edit the layout.

- Add blocks
- Blocks can be moved
- Block or layout off
- Change the layout width
- Update the text choices
- Remove layout expressions
- Copy layout settings

Using this pseudo-effect, the configurations of the blocks that are part of the layout created are created.

When you create the initial block, an additional layer is created beside it in the form of six points. If you select it and navigate the Effect Controls panel, it will be located there, and Ustav layout settings are located there.

- Text Sizing
- Spacing, leading, tracking
- Change color
- Controls with numbers
- Controls from the bulleted list
- To-do list controls
- Quote control
- Controls for the Divider
- Controls for callouts

New Changes:

- Correct some bugs.
