1.
2.

Blender - Flowify is a versatile Blender add-on designed for 3D modelers, specializing in seamlessly bending objects to conform to surfaces with evenly spaced four-sided faces and four corners, or cylindrical attributes.

How to use tools to design 3D modeling?

You can use "Blender - Flowify" to design your project.

The tool utilizes a flat reference grid for precision in deformation, enabling the creation of intricate objects that may pose challenges in conventional modeling techniques.

Key features include real-time updates, target surface adjustments, versatility for both flat and cylindrical surfaces, seamless material transfer, and compatibility with various object types.

"Blender - Flowify" Samples:

Additionally, the Flowify modifier allows for fine-tuning of bending options, while compatibility with Blender's Quad View mode enhances control and precision. Flowify unlocks creative flexibility by streamlining the process of bending objects in 3D space.
