Nobe Display:

The Additional Display Tool for DaVinci Resolve allows users to mirror their Color Grading suite display to an external screen for easier monitoring, without requiring extra hardware. It leverages GPU acceleration for real-time performance and supports monitor calibration with ICCProfile and 3D LUTs. Users can make quick image adjustments, including gamma, gain, and RGB channel tweaks, and can place the mirrored preview anywhere on their desktop or stream it via NDI® integration. The tool works seamlessly in both the Edit and Color pages within DaVinci Resolve, enhancing workflow efficiency and flexibility.
