Tools　　Database
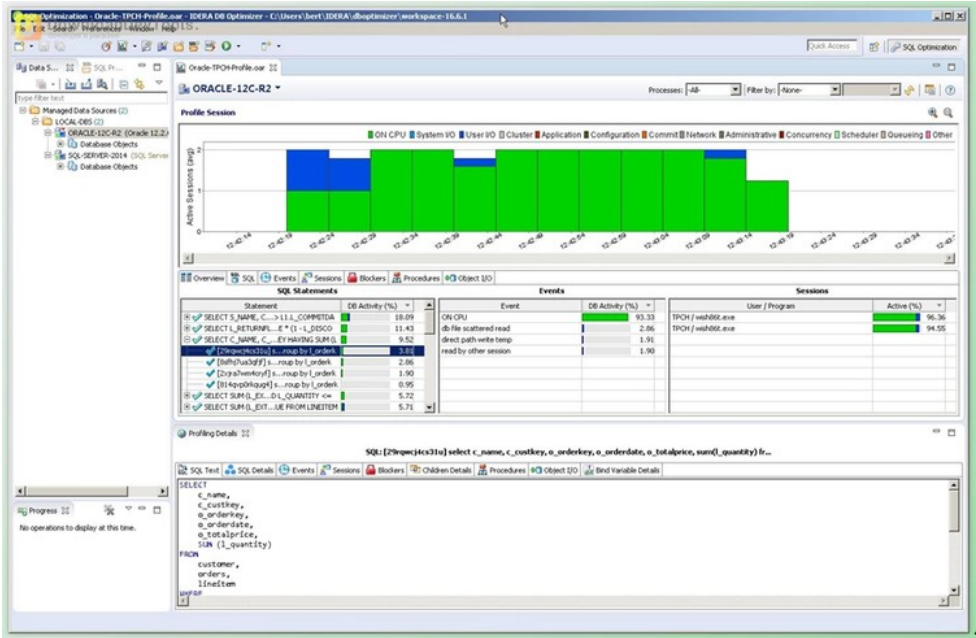

IDERA DBArtisan can proactively manage all the DBMS, just like Oracle, SQL Server, and Sybase. It can reduce the training requirements and the collaboration among the different teams across the organizations for the users. Managing the multiple Oracle-specific schemas as well as the SQL Server, which is advanced for the object properties just like the temporal table, in-memory table, and finally, the natively compiled trigger, which is present.

can provide a very comprehensive tool that is capable of helping the user in order to manage the space as well as the data along with its performance in order to keep the user database optimized as well as available. Managing the performance of the user database along with the building process can monitor and help the user to understand who is connected to the database along with each other activity and the session related data. The sophisticated diagnostics are capable of helping the user and the developer in order to pinpoint the inefficiencies that result in the poor management of the space, tracking, and the key database and metadata and metrics over time.

IDERA DBArtisan permits the user to view the execution plans using the graphical as well as the user-customizable display of the internal processing of the database and the other priorities of the present queries. It can probe into the performance of the statement of the SQL by providing a very visible insight as to how the syntax the index, and the data skew are affecting, and it varies in performance over time in different situations.

The advanced management of the tools of the data is capable of helping the users in order to move the schema as well as the corresponding table across the same or a different platform that is present. The migration process of the wizard is capable of guiding the administration to open a multiple-step process that permits the user to select the source and also targets the data source and select the type of object and the specific object to be migrated. The user can specify a flexible set of options for the migration process, and the process of viewing the operation's progress is provided to the user.

IDERA DBArtisan can establish and maintain the database's security, whether the user is managing the existing production database or even setting up the new environment. The user can find consistent support which is across the supported

platforms as DB Artisan permits the user in order to view and revoke the permission or the privileges. Whatever the user opens the security-related object just like the user or role, the permission permits the user in order to assign the permission on the object basis.

Key Features of **IDERA DBArtisan** :

1. It can access different relational databases as well as programs from the user interface.
2. It can handle multiple programs such as Oracle, SQL, Db2, and Sybase right out of the UI.
3. It can manage the distance proactively, information along with the functionality with the analytics which is built in.
4. It can effortlessly transfer the table's information across different platforms for the user and developer.
5. It can quickly locate and fix the performance and the problems with the use of smart diagnostics.
6. It can shield the data protection along with the perspective and then grant and reverse the user's permission.
