Aescripts BorderPatrol v1.0:

Resize your Silhouette layers In After Effects with simplicity whilst keeping stroke widths and curved corners. Works with parametric and bezier path contours.

To serve and protect

BorderPatrol Provides a painless approach to resize contours in After Effects while still keeping stroke widths and curved corners. All you have to do is correct the contour layer's scale land and contours can resize relative to the coating's anchor line. BorderPatrol functions together with Parametric and Bezier Trail contours.

Repositioning the anchor point

Shapes divert relatively to The contour coating's anchor line providing you the versatility of repositioning or animating the anchor line at any moment. "Leave Anchor" may keep stroke widths and curved corners with no repositioning the anchor line.

Collapse stroke alternative

Maintaining stroke widths Is cool and all but what if you would like it to shrink down the shape to nothing? That is where "Collapse Stroke" can help.

How to install

- 1- Quit After Effects
- 2- Copy the "BorderPatrol.jsxbin" file into the ScriptUI Panels folder:

Mac: /Applications/Adobe After Effects /Scripts/ScriptUI Panels

Windows: C:\Program Files\Adobe\Adobe After Effects \Support Files\Scripts\ScriptUI Panels
- 3- Open up After Effects again
- 4- Make sure the **"Allow Scripts to Write Files and Access Network"** checkbox is enabled in **"Preferences > Scripting & Expressions"** (for older versions of After Effects check "Preferences > General")
- 5- Navigate to the Window menu you'll see "BorderPatrol.jsxbin" near the bottom.
