Aescripts Auto Savior v1.2.0 (Win, Mac):

Auto Savior is a professional tool for managing auto-saves and backups in After Effects, offering enhanced features compared to AE's default auto-saver.

It provides three key functions: Project Auto-Save (saving only the current project without creating copies), Daily Backup (creating daily copies for long-term projects), and Incremental Copies (managing multiple versions).

Users can control save intervals, backup location, and file management, including automatic deletion or archiving of older versions. The tool offers customizable settings, a "Save Now" button, and an adaptive interface, ensuring efficient and reliable project-saving processes. Preferences are saved for future sessions.
