Does this product work on Windows and Mac Os? We mostly include the operating system in the title. If it is not written, it will work on Windows, and you can for the Mac version.

- Beat Detection: BeatEdit includes an Extremely accurate Beat Detector created by universities in Porto (Portugal) and Victoria (Canada). This conquer tracker goes far beyond simple peak detection, combining several procedures and a whole lot of specialist knowledge to get accurate results, even with tunes where the beat isn't obvious.
- Markers: Picture beats as marks on your essay. You could also easily copy, paste, and move markers.
- Conquer Wiggle: Whether you would like to reestablish sliders, 2D or 3D layers, or time-remap your footage -- that the conquer wiggle does everything. Endless possibilities, complete control, and a lot of presets. It supports conquer patterns, so the cartoon acts differently for every beat.
- Duplicate Keyframes: BeatEdit can obviously replicate your keyframed animations in sync with the beat, but in addition, it includes a potent constant mode that offsets every rep, so it begins exactly where the previous one finishes.
- Stagger Layers & Keyframes: Want your text to look step by step with the beat, or sync your keyframes up into the audio? Our stagger attributes are your very best friends!
- Conquer Choice: BeatEdit provides complete control over which beats your cartoons respond to - you can select only every fourth beat, pick beats or subdivide the beats. BeatEdit can even respond to other rhythmically related points of your own music to make much more variation.

New Changes:

- various bug & compatibility fixes
- New quantization feature that improves beat detection
- Corrected copy/paste issues
