Blender Market - Redsquirrel Summer Animated Vfx Grace:

This high-quality red squirrel model, designed for summer scenes, includes 4K skin and fur textures, full rigging, and animations, compatible with close-up shots. Built-in Blender with Cycles rendering, it's modeled to a real-world scale and comprises the body, eyes, glands, tongue, and teeth.

The detailed rigging system offers numerous controllers for precise movements, including IK/FK switches for the tail and legs, custom controls for the spine, head, and neck, and fine-tuned facial expressions. The fur is hidden for faster rendering, and resetting the model to its default pose involves zeroing all controllers and disabling specific constraints.
