Aescripts Utility Buddy v1.1:

Utility Buddy by SubPixel LLC is a versatile tool for managing fonts, effects, colors, and expressions in After Effects projects.

It enables users to locate and replace fonts, update effects and layer styles, and change project colors easily using a Color search feature.

The tool also helps users find and modify expressions throughout the project.

It's particularly useful for streamlining edits when working on client projects or when switching design elements.

However, it does not support fonts used within effects like Numbers or Timecode.
