EMS SQL Manager for Oracle is a high-performance database application for Oracle database creation and management. SQL Manager for Oracle functions with almost any Oracle variants from 8.1.7 to the latest one and supports the newest Oracle Database characteristics and information types such as compacted, OLAP, read-only and read-write tables; imperceptible indexes; chemical triggers, activates with FOLLOWS clause along with many others. It offers lots of powerful Oracle tools like PL/SQL Code Debugger, Backup/Restore Database wizards, Visual Database Designer to make Oracle database in several clicks, Visual Query Builder to compose complicated Oracle SQL queries, Database Statistics to track Oracle functionality, Grant director for successful Oracle security direction and a lot more useful features for effective Oracle management. SQL Manager for Oracle includes a sophisticated graphical user interface using a well-described wizard system, so clear in use that even a newbie won't be confused with that.

SQL Manager for Oracle enables efficient database management from one port while also providing the tools required to execute DML and DDL commands from an Oracle database. The program intends to supply a high-performance yet user-friendly operational environment for database administrators.

SQL Manager for Oracle provides compatibility with Oracle empowers users to configure the database connection with an easy step-by-step wizard manually. For safety purposes, it may be configured to use SSH tunneling.

Placing the link details isn't the only task carried out using a wizard. In reality, users may create new databases based on existing templates with the support of a magician and execute various other administrative operations by clicking the "Next" buttons. For example, an individual can create innovative statistical information about the database material, execute database backups, restore them if necessary, disable or enable limitations, compare databases, create reports, and much more, all with wizards.

SQL Manager for Oracle includes an integrated SQL editor and also a query builder that enables users to create, debug, and run queries and scripts, be they complex or simple. With line numbering and syntax highlighting, the editor becomes an important addition to the total package.

Additionally, users may create database objects, play in-database hunts, extract articles, and publish metadata info. The dependency tree is readily created by the program, both for functional and multivalued dependencies.

The application also comes with a PL/SQL code debugger and a visual database programmer that you can use to construct a database without writing code.

SQL Manager for Oracle lets all users handle and administer an Oracle database under precisely the same roof. They do not need to download and install additional tools to meet several tasks and execute specific operations. Its feature set isn't confined to database regular operations but also focuses on development and security.

- Newest Oracle Database version service
- Rapid database management and navigation
- Strong tools to make your work with Oracle Database as easy as it could be
- Easy-to-use wizards performing Oracle Database administrative jobs
- Straightforward management of Oracle Database objects (such as create/edit/drop surgeries)
- Successful security management
- Advanced data manipulation applications
- Excellent visual and text tools for query construction
- Impressive data export and import capacities
- Visual Database Designer to Manage database arrangement in a few clicks
- Report Designer with clear in use report construction wizard
