NCH PhotoStage Professional v11.57:

PhotoStage Slideshow Software enables users to easily create dynamic multimedia slideshows from photos, videos, and music. The software offers an intuitive drag-and-drop interface for arranging slides and a variety of effects like zoom, crop, fade, and pan, along with transition options such as the Ken Burns effect. Users can enhance their photos and videos with built-in optimization tools, including brightness, saturation adjustments, and image editing features.

It allows for adding captions, music, and narration, with audio effects like fade, amplify, and reverb, and support for mixing multiple music tracks using the MixPad Audio File Mixer. The software also includes a royalty-free sound library and options for recording or importing narrations.

Once the slideshow is created, users can share it by burning it to DVD, uploading it to YouTube, Vimeo, or Flickr, or saving it to mobile devices. It supports various export formats, including MP4, AVI, MOV, and GIF, and offers full HD and 4K resolution. The software also allows for burning Blu-ray discs and exporting HTML5 videos for embedding on websites.

PhotoStage is ideal for creating slideshows for special occasions such as weddings, vacations, and memorials or for business use like real estate and product showcases.
