Blender Market - PSD Layers for Blender:

The PSD-Layers add-on for Blender allows you to paint textures in layers, similar to programs like Photoshop or Krita, offering control over blending modes, opacity, visibility, and more. It uses standard Blender shader nodes, ensuring it remains light and fast without the need for complicated node editing. Each layer features a "Pack" icon that turns red when the image needs saving, making saving easy with a single click. The Palettes section includes a "Paste Values" icon for quickly pasting hex color palettes from websites in various formats like XAML, text, or CSS. Additionally, the shader can be easily switched between emissive and principled BSDF, with options to make it transparent or not with just one click.
