Blender Market - Dynamic Shapekeys v1.1.5:

Dynamic Shapekeys is a specialized addon for Blender that assists with creating animations within the edit or sculpt modes with shape keys.

It is capable of using both sequential and relative modes which gives the user the ability to create keyframes on specific frames or arrange frames harmoniously.

The addon supports quick assignment of bounding groups on shape keys, which makes it easier for the user to maintain minimum and maximum values that will be kept during the creation of keyframes.

Additionally, this works fluidly with meshes that have been added which improves efficiency significantly in this area.
