I'll teach you how to utilize Google Colab to create Stable Diffusion images. We'll look at a critical concept: prompt the definition, construction, and the best way to make the perfect prompt. We'll begin with the fundamentals of prompts and move on to more advanced ones while learning about lighting, rendering, and unique prompting methods. We'll then dive into the details of what StableDiffusion will be, learn how you can use it locally, and learn about its capabilities and beneficial extension modules. We'll also explore how to work with models from third-party sources and build yourself to create your own. You'll be able to create characters with any pose, with realistic and programmable lighting, create personal fashion characters, change their clothes as well as transform everyday street scenes into cyberpunk-inspired art and create stunning interior designs using space and utilize ChatGPT to create quality prompts, in addition to other valuable skills. At the end of the course and through the skillful application of the techniques learned, you can create virtually all the artwork you could imagine and then apply them to your work.

Make sure you buckle your seatbelt and are prepared. Let's get started!

What you'll find out?

- A comprehensive course that will teach students how to write professional-looking questions and master the basics of AI painting
- Develop all the relevant capabilities to be an AI artist
- Change the pose of your character, change outfits, alter lighting direction, and much more within your world
- Transform everyday streets into cyberpunk masterpieces
- Make sophisticated interior designs using basic sketches
- Make your model
- Use ChatGPT to benefit you and dramatically improve the efficiency of your work.

What is Ultimate Stable Diffusion AI art Course (beginner to pro)?

This course seems to focus on teaching students how to create digital art using the Stable Diffusion AI technique, with an emphasis on using Google Colab. Here's a breakdown of the key points mentioned in the description:

- Google Colab: The course teaches how to use Google Colab, a cloud-based platform that provides free access to GPU resources for machine learning and AI projects.
- Prompt Creation: It covers creating prompts for generating art with Stable Diffusion AI, from basic to advanced techniques.
- Lighting and Rendering: Students learn about lighting and rendering techniques to enhance the visual quality of their artwork.
- Stable Diffusion: Explain what Stable Diffusion is and how to use it locally and through beneficial extension modules.
- Working with Third-Party Models: Demonstrates how to work with AI models from third-party sources and create
