Aescripts Shifter:

Shifter 2 is a tool designed for creating dynamic, staircase-style animations in Premiere Pro and After Effects, offering customization and efficiency for editors and motion designers. It allows users to arrange clips or layers in ascending, descending, or random order, adjusting their easing curves intuitively through a graph. Users can control the duration of each element using In and Out points or set intervals, with real-time previews for immediate feedback. The tool also provides a streamlined interface for quickly organizing and rearranging items, and it supports saving unlimited presets for future projects.
