

QuartzCode v1.67.1 for macOS Pre-Activated

2025-04-02 09:33:54 label 我要反馈 下载页面

QuartzCode is a vector drawing and animation program that turns your drawing and cartoon into Target C or Swift code in real-time. QuartzCode is acceptable for OSX/iOS programmers or programmers.

QuartzCode is a quick, lightweight, powerful animation tool that creates Objective-C and Swift code to get iOS along with OS X on-the-fly. It is the fastest way to master and learn Core Animation, enabling you to experiment with complicated animation without coding abilities. With 6 coating types and over 25 animatable properties, the cartoon possibilities are infinite.

Visualize your thought, and iterate between distinct animations quickly. Creating animation manually utilizing programming in XCode is time-consuming. QuartzCode dramatically lowers the opportunity to make animation. Here are the methods used in this informative article cartoon.

- 9 complete animations
- Shape coating, text coating, replicator coating, and impact layer utilized
- Mask change animation
- two animatable keypaths utilized, alter and opacity

Twist List: Extension List shows all layers. The layers are organized based on coating hierarchies and displayed in colored thumbnails. You can alter layer hierarchies by altering layer sequence in Layer List.

All layers behave like CALayer or its subclass from QuartzCore frame. A number of the behavior could differ based on coating kind in QuartzCode.

You can choose layers utilizing Layer listing or emphasize them. You may even hide or lock coating utilizing Layer List.

Cartoon List: Cartoon List is where several cartoons are handled. Insert or remove animations.

Layer Inspector: Layer Inspector lets you alter settings. Different coating types have distinct Inspector Settings.

Cartoon Timeline: Cartoon Timeline panel screens animations such as layers. It may display animations for several layers, cartoons for layers that contain cartoon only, and animation for chosen layers only. These settings can be altered with F1, F2, and F3.

Keyframe Inspector: Keyframe Inspector is used to altering cartoons and their own keyframe settings.

- Rebus Zone
- Adults
- Turn Drawing and Animation to Code: Employ animation to vector drawing or raster picture. QuartzCode creates Goal C or Swift code in real-time to be utilized in iOS or OS X project.
- Multiple Dimensions: Produce several cartoon states in one QuartzCode undertaking. Quite helpful when you have to create distinct animation utilizing an identical advantage. Each cartoon has its own way that you may call using the code that is generated.
- SVG Import: Import SVG Files made from additional vector drawing application to QuartzCode
- Common Shade: precisely the same color across different layers and timelines. The color is made as to the land from generated code, so it is still possible to change it using Xcode.
