

CData Drivers for Veeva v24.0.9111 (11 Dec 2024) All Platforms + License Key

2024-12-18 23:03:15 [label](#) [我要反馈](#) [下载页面](#)

offers a comprehensive solution for accessing and integrating Veeva Vault data effortlessly across various platforms. These bi-directional drivers provide seamless connectivity, enabling users to integrate Veeva data with BI, reporting, analytics, ETL tools, and custom solutions with ease. By facilitating real-time access to Veeva Vault data from anywhere, users can streamline their data processes and enhance decision-making capabilities.

With **CData Drivers for Veeva**, users can experience unparalleled query performance and comprehensive access to Veeva data and metadata. The drivers seamlessly integrate with popular analytics tools, ensuring smooth data transfer and empowering users to leverage Veeva data effectively for reporting and analysis. Additionally, the drivers extend the capabilities of ETL tools, facilitating robust and secure data movement for replication, warehousing, and other data management tasks.

Developers benefit from the simplicity and efficiency of integrating with Veeva using CData Drivers, allowing them to build high-quality applications faster than ever before. The drivers support standard database protocols, enabling easy connection and management of Veeva data from a wide range of database management applications. Whether it's connecting Veeva data with workflow automation tools or leveraging data virtualization capabilities, **CData Drivers for Veeva** provides a versatile and reliable solution for seamless data integration and management.

This package includes the following components:

- Excel Add-In for Veeva
- Veeva ADO.NET Provider
- Veeva BizTalk Adapter

- [Web & Script](#) [Other](#)

- Veeva Data Cmdlets
- Veeva FireDAC Components
- Veeva JDBC Driver
- Veeva MuleSoft Connector
- Veeva ODBC Driver
- Veeva Power BI Connector
- Veeva SSIS Components
- Veeva Tableau Connector

Key Features of CData Drivers for Veeva :

1. Bi-directional connectivity for seamless integration of Veeva Vault data.
2. Real-time access to Veeva Vault data from BI, reporting, analytics, ETL tools, and custom solutions.
3. Unmatched query performance and comprehensive access to Veeva data and metadata.
4. Integration with popular analytics tools for smooth data transfer and effective reporting and analysis.
5. Extension of ETL tool capabilities for robust and secure data movement, including replication and warehousing.
6. Support for standard database protocols such as ODBC, JDBC, and ADO.NET.
7. Simplified integration for developers, enabling faster development of high-quality applications.
8. Compatibility with a wide range of database management applications for easy connection and management of Veeva data.
9. Integration with workflow automation tools for streamlined data processes.
10. Data virtualization capabilities for enhanced integration and query performance.
