Aescripts – Light Equalizer for Premiere v1.0.4

2025-02-10 17:02:12　　label 我要反馈　　下载页面

Automatically analyze a video clip to adjust the brightness as well as white balance, by setting the best Lumetri Effect keyframes of exposure, temperature, and tint

The fluctuations in white balance and exposure in the video footage that typically occur when shooting in natural light in manual mode could affect the quality of a shot and can be difficult to correct in post-production. This extension will examine a video and automatically set the correct keyframes of temperature, exposure, and tint of the Lumetri Effect to compensate for the changes in ambient light.

New Changes:

- support for more languages like: German, French, Spanish, Italian, Japanese, Chinese.
