Tools　Applications
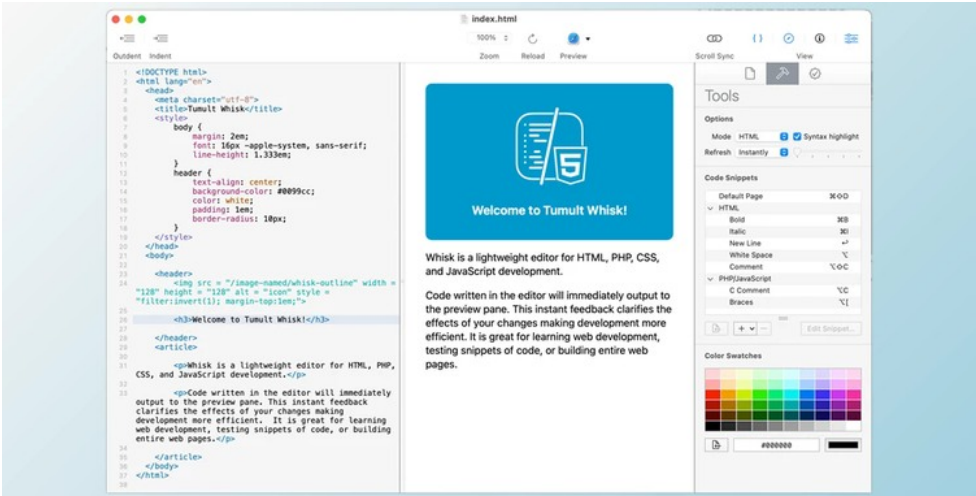

Tumult Whisk, a lightweight HTML and PHP editor, has a preview pane showing the page you are currently typing. This app is essential for any web developer's toolkit.

Whisk is a must-have app for HTML, PHP, and CSS programming. It's great for learning web design, building web pages, and testing code snippets.

The integrated live preview of Tumult Whisk breaks down the monotonous cycle of saving HTML files, writing HTML, and then loading the page again in the browser. The combination of the viewing and writing phases clarifies your changes and speeds up web page creation. W3C-based validation will highlight any errors. It uses the same rendering engine as Safari, so it is both standards-compliant and swift.

Whisk for macOS Great Features:

- Preview pane quickly renders HTML and PHP as typed, using the same engine as Safari
- Watched Files automatically (or manually) determine when files are changed and will reload the web preview
- Live HTML W3C-based validation shows errors and highlights problem tags with a red underline
- Preview to other browsers or the Hype Reflect app on iOS
- Web inspector/console/dev tools access
- Customizable syntax highlighting coloring
- Reusable code snippets and color swatches
- Scroll sync keeps can keep the editor and preview at similar spots
- View HTML source code generated by the PHP engine
- Attach Style Sheets for viewing how blog posts/markup will look with external styling
- Written in Cocoa exclusively as a macOS app (supports 10.11 through 10.15)
- It adopts new macOS features and is gorgeous in Light and Dark modes
