# Aescripts Text Chain 2.0 - Full Script

2025-02-10 17:15:59　　label 我要反馈　　下载页面

**Aescripts Text Chain 2.0 - Full Script:** Text Chain joins various text layers in a dynamic way and limits the whole string within the specified size.

If you are using typography with various settings (font-weight or size, font size as well as all caps or upper and lower, etc..) rather than having a single text layer, it is possible to create multiple layers using different settings and connect them in a particular direction. The layers will always change according to the text size. This is usually the case for leaderboards or name supers, which combine upper and lowercase letters, or all caps or smaller font sizes.

Additionally, if the text line needs to fit within a specified size, you can define an upper limit width, so that the content will be restricted to the width you set.

- Link Text layers joined
- Global tracking and individual tracking of individual words controls
- Max width switch
- Max width value slider
- Create animations for all properties of the Effect Controls panel

**V2.0:**

- Fixed issue that was caused by a missing Psuedo Reference (error message: "missing effect reference")
- Fixed Licensing Problem
- Catalina Compatible
- Reduced compatibility with CC 2019 and 2020
