What is CRT Transitions?

CRT Transitions typically refer to video transition effects that emulate the visual characteristics of older cathode-ray tube (CRT) displays. CRTs were the standard technology for television and computer monitors before the widespread adoption of flat-panel displays. These transitions aim to replicate the unique visual elements associated with CRT screens to create a nostalgic or retro look in video editing.

These transitions are often used in video editing to evoke a vintage aesthetic, especially for content that aims to capture the feel of older technology or a bygone era. Video editing software or plugins may offer CRT transition effects that can be applied to video clips to achieve this specific look.
