After Effects

Payhip GHXZ My Working Process (With Preset):

The workflow involves using Adobe After Effects and complementary tools like Twixtor, Magic Bullet Looks, and Boris Continuum to create high-quality video effects. Topaz Video Enhance AI (v2.6.4) is employed for advanced upscaling, while Adobe Media Encoder ensures optimal export settings. The process includes:

- **Pixel CC with Topaz Settings**: Applying creative color grading (Pixel CC) in After Effects, enhanced with Topaz's AI-powered models for refined details.
- **Twixtor Settings**: Leveraging Twixtor plug-ins to create smooth, slow-motion effects with user-defined parameters.
- **Upscale Workflow**: Upscaling videos using Topaz Video Enhance AI while maintaining sharpness and fidelity.
- **Quality Preservation on Upload**: Exporting through Media Encoder with optimized settings to avoid quality loss during uploads.

This setup requires Adobe After Effects (any version), Adobe Media Encoder, and plug-ins like Twixtor, Magic Bullet Looks (MBL), and Boris Continuum (BCC) to achieve professional-grade results.
