What is EVOKE – Presets?

"EVOKE – Presets" is a phrase that might refer to a set of predefined or preconfigured settings or parameters used in various digital tools or software applications. These presets are designed to help users achieve specific outcomes or effects without having to manually adjust all the individual settings themselves.

For example, in the context of photography or graphic design software, there are often presets that can be applied to images to quickly change their appearance. These presets might adjust things like color balance, contrast, and saturation to create a certain style or mood in the image.
