Flow 4 v4.0.2 – The Next-Level Asset Tool For Blender: Accelerate your workflow and enhance your scenes with Flow, The next-level asset manager that comes with Blender. What's the reason for the next level? It's not the basic assets manager but rather the exclusive set of tools created to enhance the overall Blender workflow. Do not waste time browsing your folders. Just add your assets and then use the tools with just only a few mouse clicks! You can create your scenes faster than ever before!

Asset Painter

Include your assets into the scenes with less effort than ever before! Utilize the easy Asset Painter tool that is accessible through the 3D viewport and paint your objects directly to your scenes. You can also select objects for painting or design-specific Painter Collections, containing sets of models to give you even more variety! Create the random scale and rotation ranges, and save time savings by accurately scattering hundreds and new models in a matter of seconds!

Material Painter

Find the best method to include materials in your objects. Paint them directly within the 3D viewport with just a mouse click. Limit painting to specific regions, like sharp edges or seams. Create automatic UV maps while painting.

Asset management and the Asset Browser integration

When you save assets using Flow it will be able to save the supported types that are also accessible through the Blenders Asset Browser, provided the connection is made to the Flow Library directly to the Asset Browser! This gives you an additional option to manage your assets most comfortably. Categories, subcategories, and previews in the Asset Browser are also automatically created and appear much better than the automated Blender previews!

Asset properties within the panel

Create node groups specific to your objects' materials, which will be displayed in the panel, allowing for an easier workflow. It is also possible to design custom properties and link them to virtually any value in Blender to provide even more custom options of your objects!

Other fantastic tools for a more efficient workflow

There are even other amazing tools within Flow similar to the Instance Tools or brush tools. To make your workflow using Blender even more simple and more enjoyable.
