STEP-BY-STEP GUIDE

Open your project. In your project window you can see this structure:

You need to finish only 3 simple steps to create a 3D portrait. Don't use photos with extreme face angle

STEP 1. CHOOSE FRONTAL PHOTO AND PUT INTO COMPOSITION

STEP 2. SET MASKS

Open composition «Adapt Mask» and set masks for your photo.
If your photo doesn't contain any elements for masking (for example, hidden ears under hairs) just move it out of the screen.
You can see more examples in the PDF file «Mask Examples»

STEP 3. FINAL CONTROLS

The last step – final customizing your photo.
Choose color correction filters, and additional elements as particles or light leaks, add widescreen mode, and animate your face.
You can also add a few rotations to your image to create a more realistic 3D. Combine it with your face animator.

What is a 3D Face Animator?

A 3D Face Animator is a tool or software application designed to animate and manipulate digital representations of human faces in three-dimensional space. This technology is commonly used in various fields, including computer graphics, animation, film, gaming, and virtual reality.

tools play a crucial role in the creation of animated characters, particularly in industries where realistic and expressive characters are essential for storytelling or immersive experiences. The specific features and capabilities can vary among different 3D Face Animator software or tools.
