With a smartphone or a dedicated camera, you have access to hundreds of images available in the gallery on your device, or on your hard drive in your computer. Let's discover the full potential of these photos and transform them into stunning artwork.

With almost every program like Photoshop, Adobe Photoshop, Lightroom, and Gimp on your computer, as well as Lightroom Mobile, Photoshop Express, or Snapseed for mobile devices, you'll learn quick and easy techniques to make stunning photographs with the photos you've already captured.

The first step is to look at the elements that make a great image, such as composition, as well as exposure rules of thirds, composition, and design. After that, we'll begin to make the most basic tone adjustments by setting the darkest darks and the most bright-colored lighting in your photo before proceeding to basic adjustments to the color using clarity along with saturation and clarity tools. Before we move on to simple and quick retouching techniques, we will learn fast and effective methods to convert your photos in color into beautiful black and white photos.

The class is open to everyone, regardless of previous experience or background. The objective is to enable you to quickly and effectively transform your photos into show-worthy art, not become a Photoshop or Lightroom expert. The participants will leave with the expertise as well as the tools and methods to produce stunning photos. This is a fantastic opportunity.
