Drawing Toolkit (Videohive 48441891):

The Drawing Toolkit for DaVinci Resolve enhances video creation by allowing users to draw and trace shapes, making content more engaging. Ideal for various applications like real estate drone videos, wedding invitations, and social media promos, it features a built-in tracker for highlighting property boundaries and adding cartoon objects. The toolkit includes three cursor designs, and five pre-made hand-drawn shapes (circle, rectangle, heart, arrow, thumbs up), and offers extensive customization options such as animation duration, colors, and handedness. A video tutorial is also provided to assist users in getting started quickly.

- **Draw Any Shape:** Users can create custom shapes using drawing tools, allowing for unique designs beyond predefined options.
- **Track It Directly on Edit Page:** This feature would enable users to track shapes directly in the editing interface, streamlining the workflow.
- **Custom Animation Duration:** Users can set specific durations for animations, giving them control over the timing of transitions and effects.
- **Right/Left Handed Options:** This could refer to customizable cursor designs or controls tailored for user preferences, enhancing usability.
- **3 Cursor Design:** Offering three different cursor styles can help users personalize their experience or choose the best fit for their tasks.
- **5 Pre-made Shapes:** Providing a set of ready-made shapes can save time and serve as a starting point for users who need quick elements in their projects.

Package information

The latest update for DaVinci Resolve Studio 18 and DaVinci Resolve 18, published on October 11, 2023, includes resizable macros to enhance your video editing experience.
