Blender Market - NGon Loop Select v3.1.0:

NGon Loop Select is a Blender addon that streamlines the process of selecting edge loops around Ngons.

After installation, you can quickly select a loop by double-clicking an edge or by pressing 'D' with an active edge selected.

To select multiple loops, simply hold down the Shift key.

Additionally, you can select boundary loops of all coplanar faces by holding Shift+Ctrl and double-clicking.

If the selection isn't accurate on the first try, the addon will automatically attempt again with a wider face angle threshold.
