PSOFT Pencil+ 4 Line - v4.1.1 + Blender Addon:

PSOFT Pencil+ 4 Line for Blender is an impressive post-processing module that allows you to generate beautiful hand-drawn lines for 3D models. It utilizes the knowledge gained in the animation field to provide an amazing array of expressive styles, both broad, such as those used for mechanical, and acute, like the modulation of lines found in Japanese manga. Combine these factors with the node-based editor along with the accurate time preview in the Viewport and you get an addon that will bring your imagination to life while providing a professional finish.

Other noteworthy features include the addon ability to send the lines drawn to EPS to allow hands-free resolution-independent vector graphics output or PLD for high-end editing in After Effects. There is also an issue of platform limitation. However, the addon offers rich customization and flexibility to the Pencil+ 4 product line through the Pencil+ 4 Bridge for Blender (version 4.0.1 and newer). There are no limitations regarding the seamless interaction it has with the PSOFT Pencil+ 4 render application.
