Aescript Blend Scatter:

Blend Scatter is an After Effects tool that facilitates seamless blending and scattering of layer properties, allowing for quick and intuitive adjustments.

It enables users to duplicate layers and automatically blend or randomize properties, offering flexible control over visual effects. The tool supports a wide range of properties, including color, 3D effects, position, scale, and angle, without relying on expressions. With its simple UI and fast performance, Blend Scatter is designed to streamline workflows for both beginners and advanced users

Blend and Scatter Properties:

- **Blend:** Distributes properties evenly between the top and bottom layers without modifying their original values.
- **Scatter:** Randomly scatters properties between values of the top and bottom layers, generating unique outcomes each time.
- **Copy:** Duplicates specified layers with the entered "copy" settings.

Property Support:

- Compatible with most properties, including 3D, effects, position, scale, angle, color, layer styles, and time remap.

Excludes shape, mask, and text source properties.

Additional Features:

- **Auto Select:** Automatically selects the same properties across chosen layers, ideal for uniform adjustments across multiple layers.
- **Keyframe Support:** Adds keyframes for modified properties, bypassing the need for expressions.

Interface and Performance:

- Simple UI panel designed for ease of use.
- Optimized for fast operation in After Effects.
