**Blender Market - Audvis - Audio Visualization v7.1.0:** Introducing AudVis, a powerful add-on for Blender 2.8x designed to create stunning audio visualizations. AudVis offers a range of features, including the Real Time Analyzer and Sequence Analyzer, to help you build dynamic animations and music videos that react to sound in real-time.

### How can we make stunning audio visualizations in Blender?

You can use "Blender Market - Audvis - Audio Visualization."

The Real-Time Analyzer allows for animations that respond to music or any sound input from your sound card or microphone, making it perfect for parties with its fullscreen 3D Party Mode. The Sequence Analyzer is tailored for creating captivating music videos.

AudVis also includes a Video Capture feature, which periodically updates an image taken from your webcam to use as a texture, enhancing your visual projects when combined with the Real Time Analyzer. The Example Generator allows you to create grids of objects with numerous customization options, adding a fun element to your visualizations.

### "Blender Market - Audvis - Audio Visualization" Samples:

The Shape Modifier provides extensive animation capabilities for various object types, including mesh, curve, surface, lattice, and grease pencil. It allows you to animate vertices' locations, vertex group weights, UV maps, vertex colors, and more.

For those using render farms, AudVis supports the baking of all drivers and Shape Modifiers to ensure compatibility. Additionally, the Spectrogram feature generates and updates spectrogram images, which can be baked and used for shading, texturing, or with geometry nodes.

AudVis is the ultimate tool for creating vibrant, responsive audio-visual content in Blender 2.8x.
