Have you ever tried to create an erupting thunderstorm? It's not difficult however, lighting flashes from lightning are ... actually, let's say that they aren't enjoyable to create. When you require many flashes, it gets exhausting.

That's precisely why I came up with this add-on. It's supposed to be fun to create a thunderstorm!

Lightning is among the most exciting and fascinating things that happen to me. As a teen, I would stand by my window for hours, and see the lightning illuminate the dark night sky. The energy is tangible. The strength and force of nature are displayed in an attractive way.

Make a full-on storm to your liking with just one click.

Every lightning is unique, based on random variables you can access.

If a lightning bolt is completely dimmed it will be invisible to cease. This provides a very efficient performance, even if there is a lot of lightning in the scene.

How to install
