BCGControlBar ("Business Components Gallery ControlBar") is an MFC extension library that lets you create Microsoft Office and Microsoft Visual Studio-like software with complete customization choices (Ribbons, Customizable Toolbars, Menus, and much more) plus a rich collection of professionally-designed GUI controls like Chart, Calendar, Grid, Editor, Gantt and lots of more.

BCGControlBar library has over 500 completely designed, tested, and fully documented MFC extension classes. Our components can be easily integrated into your application and save hundreds of development and debugging hours.

BCGControlBar (Business Components Gallery ControlBar) was designed within an MFC extension library that offers software developers the chance to package their software using Microsoft Office and Visual Studio-like interfaces.

The part comprises a wide selection of customizable choices so that programmers could personalize their apps in any way they believe they match.

The library includes support for Ribbons, Toolbars, Menus, and other visual elements while also providing many GUI (Graphical User Interface) controls, such as Calendar, Grid, Editor, and Gantt, amongst others.

With the support of BCGControlBar Professional Edition, developers can benefit from more than 200 MFC extension classes that have already been examined and recorded.

Each of the elements this bit of software includes can be incorporated into new apps effortlessly, thereby providing developers with considerable time and money savings.

Various advanced features are included in BCGControlBar Professional Edition, ranging from tab panes and auto-hide panels to docking calculations and text editors.

BCGControlBar Professional Edition also includes support for Windows 8-like tiles and packs a 2D and 2D graphs collection. Moreover, it provides developers using skinned dialogs and types, in addition to estimate controls, including curved and linear gauges, different numerical indicators, and knobs.
